

# “NewFlex” Flat Flexible Flat Wiring

- Multiple wire types & gauges (32awg = 65 strands of 50 awg wires in a flexible, flat molded format)
- Over-molded w/ silicone, polyurethane & other compounds
- Utilizing high stranded conductors
- Terminated to any component (connectors, headers, etc.)
- Cable thickness from 0.015” to 0.250”
- Operating range: -57°C to +260°C
- Outstanding tensile strength, tear/abrasion resistance

# “NewFlex” Flat Flexible Flat Wiring

- Optional flat form turns, up to 180°
- Molded y-junctions or breakouts
- Flat-to-round-to flat transitions
- Integral clamp, Strain relief
- Perfect 90° angles

# “NewFlex” Flat Flexible Flat Wiring

- Versatility: Multiple wire types/gauges into a single cable
- Performance Superiority: Impervious to shock & vibration, flexing, watertight integrity & chemical resistant.
- Alternate to Rigid Flex: More economical
- Controlled Circuits: Tighter packaging and noise reduction

# “NewFlex” In Action

DCX-Chol specializes in building complex sealed cable assemblies for Reconnaissance and Targeting Pods used in military aircraft, helicopter and UAVs. Our flexible harnesses are used in electro-optical sensor pods. These cables are mounted under the aircraft in the ball towards the front of the plane. The inner harness in the left picture has a DCX-Chol designed sealed connector with 166 pins that has to withstand 10 PSI and operate in a temperature range of -55 degrees C up to + 85 degrees C.

# “NewFlex” Dynamic Rotating Harnesses

The “NewFlex” Flat-Flexible Turret Harness is used in the Litening I & II Airborne Targeting Pods. Seven different legs use round to flat transitions. The main connector is sealed against pressure differential. And the cable endures 460° twists inside the Pod.

# NewFlex on the F-22 RAPTOR

- 40 different cable assemblies
- Cables from prototype thru Production (approx 6500 pcs) for Lots 1-7 of Aircraft
- 99.9 % Quality Rating
- 100% On-time Performance
- Contracts for Lots 7-9 for 4600 additional cables.
